PROFESSIONAL SUMMARY

DevOps, Cloud Platform, and AI Infrastructure Engineer with 8 years across IT infrastructure, Linux systems, AWS, Kubernetes, CI/CD, Terraform, DevSecOps, SRE, and workflow automation, including 6+ years focused on cloud platform reliability and infrastructure automation. Proven record reducing cloud spend, accelerating releases, improving availability, strengthening secure delivery, and standardizing GitOps-based operations across remote fintech and SaaS environments. Hands-on portfolio includes production-style Kubernetes platforms, self-hosted AI/LLM operations tooling, API-driven workflow automation, observability-backed incident investigation, and business process automation patterns designed for secure human handoff and enterprise-style operational controls.

SUMMARY HIGHLIGHTS

- Delivered \$216K+ annual AWS savings through infrastructure optimization, rightsizing, tagging, usage analysis, and cost governance.
- Reduced deployment cycles from 4 hours to 15 minutes, enabling 200+ monthly releases with zero rollbacks and stronger release validation.
- Improved platform reliability from 99.9% to 99.99% for systems processing 2M+ API requests per day; reduced RTO from 4 hours to 15 minutes.
- Built enterprise-style Kubernetes/GitOps platforms with secure secrets management, observability, ingress, storage, policy controls, backups, and runbooks.
- Designed AI-assisted operations workflows using LLMs, runbook memory, observability signals, read-only investigation, and approval-gated execution patterns.
- Created business workflow automation patterns for structured lead intake, urgency classification, approved-answer handling, callback alerts, and human handoff.

PROFESSIONAL EXPERIENCE

Senior DevOps & Cloud Platform Engineer

Apr 2022 - Present

Kanshe Infotech - Remote

- Architected CI/CD pipelines using GitHub Actions and Jenkins, reducing deployment time from 4 hours to 15 minutes and enabling 200+ monthly production releases with zero rollbacks.
- Improved platform reliability from 99.9% to 99.99% for infrastructure serving 2M+ API requests per day; implemented Prometheus/Grafana alerting to reduce recurring overnight incidents.
- Reduced monthly AWS spend by 25%, approximately \$18K per month, by auditing infrastructure, rightsizing 150+ EC2 instances, enforcing tagging, and improving environment governance.
- Drove GitOps adoption using ArgoCD and Helm, enabling 40+ production releases per week without weekend release windows while improving deployment consistency across environments.
- Integrated security scanning and secrets management into delivery workflows using Trivy, Checkov, SonarQube, and HashiCorp Vault, supporting audit readiness and SOC 2 control evidence.
- Standardized Kubernetes platform delivery, release validation, environment parity, rollback procedures, and runbook-driven operations, reducing configuration drift and improving production change confidence.
- Architected disaster recovery processes across eight services, reducing RTO from 4 hours to 15 minutes and maintaining 99.99% availability with MTTR under 30 minutes.
- Led infrastructure-as-code standardization using Terraform, reusable modules, GitOps workflows, and Kubernetes deployment patterns across environments.

Technical Stack: AWS (EKS, ECS, Lambda, CloudFormation, S3), Terraform, Kubernetes, ArgoCD, Helm, GitHub Actions, Jenkins, Vault, Prometheus, Grafana, Trivy, Checkov, SonarQube, Python, Bash, Docker

Platform Engineer

Mar 2020 - Mar 2022

Infonas - Remote

- Led migration of 12 monolithic applications to AWS, reducing infrastructure costs by 35% and improving disaster recovery readiness.
- Designed and managed GitLab CI/CD workflows for microservices architectures, scaling deployments from weekly releases to multiple daily pushes while enforcing automated quality gates.
- Designed multi-AZ VPCs, least-privilege IAM policies, and highly available EKS clusters using Terraform to support enterprise containerized workloads.
- Developed Ansible and Terraform automation for server provisioning, patching, and application rollouts, reducing environment build time from days to under four hours.
- Built Bash and Python automation for backups, restoration, and log management, cutting manual operational workload by 40%.
- Established centralized observability with ELK Stack and CloudWatch, reducing mean time to detection for critical incidents by 35%.
- Supported 24/7 platform operations through on-call rotations, incident triage, post-incident reviews, and reliability improvements contributing to a 25% reduction in downtime.

Technical Stack: AWS (EC2, S3, RDS, Lambda, SSM), GitLab CI/CD, Terraform, Ansible, Docker, ELK Stack, CloudWatch, Python, Bash

Infonas - Remote

- Developed and maintained CI/CD pipelines and infrastructure automation using GitLab CI/CD, Terraform, and Ansible, enabling reliable delivery of microservices.
- Implemented containerization and orchestration using Docker and Kubernetes/EKS, improving scalability, resiliency, and repeatable deployment practices.
- Created automated monitoring and logging solutions with ELK Stack and CloudWatch, improving operational visibility and reducing mean time to detection.
- Enforced IAM best practices and managed secrets with AWS SSM Parameter Store, strengthening security controls and audit readiness across environments.

Technical Stack: AWS (EC2, S3, RDS, Lambda, SSM), GitLab CI/CD, Terraform, Ansible, Docker, ELK Stack, CloudWatch, Python, Bash

EARLIER IT INFRASTRUCTURE EXPERIENCE

Linux Systems Engineer & Scrum Facilitator, Beyond Solutions | Jan 2017 - Dec 2017

Linux System Administrator, British Council Bahrain / Cambridge International School | Feb 2014 - Dec 2016

- Managed and optimized 200+ Ubuntu and CentOS servers supporting high-availability services, storage, Apache, MySQL, backup routines, and operational monitoring.
- Automated backups, log rotation, maintenance, and monitoring tasks using Bash and Python, reducing manual maintenance workload by 40%.
- Authored technical runbooks and disaster recovery documentation supporting audit readiness, onboarding, and repeatable infrastructure operations.

SELECTED AI PLATFORM, AUTOMATION & DEVOPS PORTFOLIO

TCA InfraForge: Built a production-style bare-metal Ubuntu/K3s HA platform demonstrating GitOps delivery, Gateway API ingress, secure secrets externalization, storage resiliency, observability, backup/recovery, and policy-driven controls with ArgoCD, Envoy Gateway, MetalLB, Longhorn, Vault, External Secrets, Prometheus, Grafana, Loki, Alertmanager, Kyverno, Trivy, Renovate, Velero, Cloudflare Tunnel, and Tailscale.

ForgeWatch AIOps: Designed local-first AI-assisted Kubernetes operations workflows using LLMs, observability signals, runbook memory, incident context, and read-only analysis patterns to support safer triage, evidence-based recommendations, and future approval-gated execution.

Project Iris: Built a local-first AI assistant platform pattern using FastAPI, React/Vite, memory governance, tool execution, managed browser capability, TLS/auth hardening, backup/restore validation, and user-facing workflow controls.

Business Workflow Automation: Designed a client-ready 24/7 lead and callback workflow for service businesses, covering approved FAQ handling, structured intake, urgency classification, service-area checks, callback-ready alerts, event logging, and human handoff.

OpenLeaf Reader Platform: Built a cloud-native platform simulation proving API gateway governance, microservices delivery, event-driven integration, release automation, observability, and chaos testing with Kong Gateway, deck, Python services, React, RabbitMQ, MongoDB, Stripe webhooks, GitHub Actions, ArgoCD, Prometheus, Grafana, Loki, and Chaos Mesh.

AI Builders Academy: Delivered full-stack platform validation for learner, parent, tutor, admin, pricing, program, trial, and onboarding workflows with CI/CD, release safety, smoke testing, and Kubernetes/GitOps deployment direction.

CORE COMPETENCIES & TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EKS, ECS, EC2, S3, Lambda, RDS, CloudFormation, Route 53, IAM, KMS, SSM, Organizations), Azure/GCP exposure, FinOps, multi-account governance.

Kubernetes & Platform Engineering: Kubernetes, EKS, Docker, Helm, ArgoCD, Envoy Gateway/Gateway API, Kong API Gateway, Istio exposure, Rancher, K3s, platform operations.

IaC, CI/CD & GitOps: Terraform, Terraform Cloud, OpenTofu exposure, Ansible, CloudFormation, GitHub Actions, Jenkins, GitLab CI/CD, automated quality gates, release governance.

AI Infrastructure & Workflow Automation: LLM workflow integration, AI-assisted operations, prompt/workflow design, local/self-hosted AI systems, n8n-style automation, API/webhook orchestration, tool-calling patterns, human-in-the-loop checkpoints.

DevSecOps & Supply Chain: HashiCorp Vault, External Secrets, Trivy, Checkov, SonarQube, SAST/DAST practices, IAM, KMS, least privilege, SOC 2, policy-as-code exposure.

Observability & SRE: Prometheus, Grafana, CloudWatch, ELK Stack, Loki, Datadog, PagerDuty, SLI/SLO, alerting, incident response, RCA, RTO/RPO, error budgets.

Scripting, APIs & Data: Python, Boto3, Bash, Groovy, HCL, YAML, REST APIs, JSON, webhooks, MySQL, PostgreSQL, Aurora, DynamoDB, Redis.

Leadership & Delivery: Agile/Scrum, SAgE exposure, PMP, CSM, mentoring, onboarding, technical documentation, runbooks, stakeholder communication.

EDUCATION

Bachelor's Degree, Geology and Applied Geophysics - University of Ado-Ekiti, Nigeria

National Certificate, Computer Science - Bamidele Olumilua University, Nigeria

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Active Certifications: HashiCorp Certified: Terraform Associate; AWS Certified Solutions Architect - Associate; Project Management Professional (PMP); Certified ScrumMaster (CSM).

Professional Development: GitOps with ArgoCD and Helm; SRE Foundations; Continuous Delivery with Jenkins; Debugging Kubernetes; Azure DevOps Engineer Expert; Kubernetes administration and Vault fundamentals.
